

Reference

Mr. Stojanko Stamkov, born on 3rd June, 1986, worked as an internship student at NEC Europe's Network Laboratories in Heidelberg from June 15th, 2006 until August 31st, 2006.

During this time he worked on

- A web-based office workflow system for document processing, storage, retrieval and reporting that he implemented in PHP and JavaScript using a mySQL database.
- A Graphical User Interface (GUI) for a peer-to-peer voice communication monitoring system based on the Session Initiation Protocol (SIP) that he implemented in Java using web services.

It is very unusual that students joining NEC for just two months get more than one task assigned. However, Mr. Stamkov completed his first task very efficiently in an extremely short period of time that exceptionally he got assigned a second task.

He was able to develop solutions for the given problems very quickly and acted on his own initiative.

He learned very fast, worked autonomously and provided excellent solutions to even tough problems. His ability to explore new technical areas and his excellent programming skills have been very helpful for our projects. Mr. Stamkov is a dedicated worker with excellent software development background.

His relationship to his supervisor and colleagues was always cooperative. We greatly enjoyed working with him and we wish him all best for his future career.

Heidelberg, August 25, 2006
